# XLI. LE SANG DES TUBERCULEUX (Figures d'Arneth)

A l'état normal, pour 100 polynuclées,  
la proportion est :

**K** 5 I. 35 II. 41 III. 17 IV. 2 V.

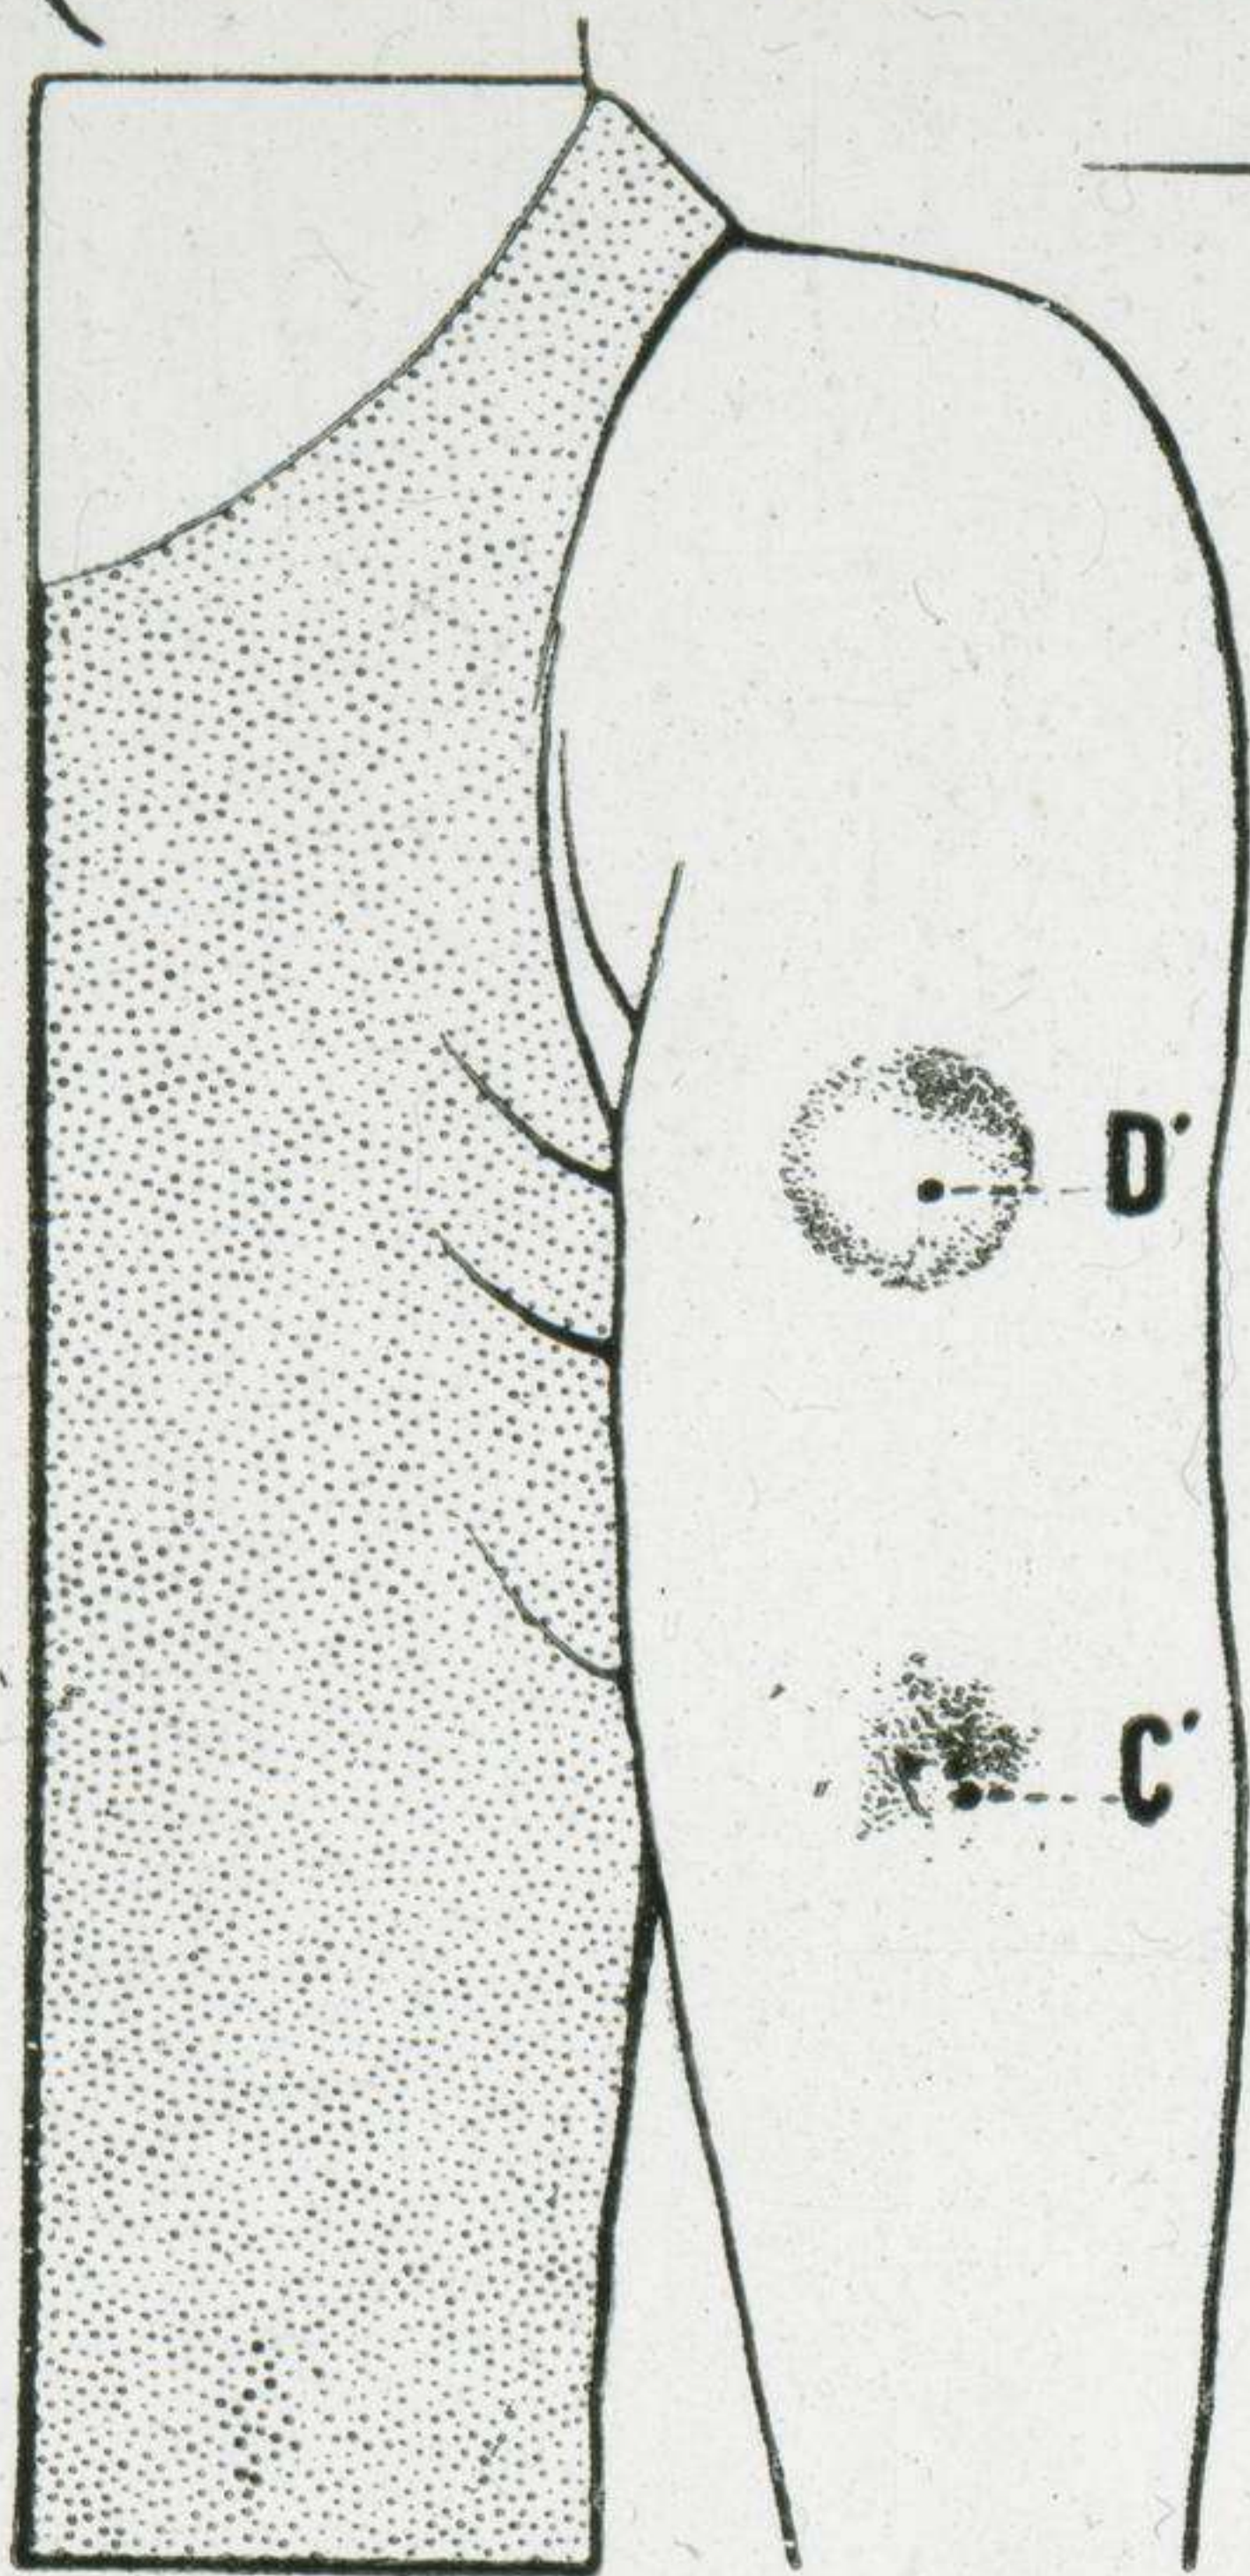

Dans la Tuberculose :

**Z** 41 I. 35 II. 19 III. 5 IV. 0 V.

Augmentation considérable des polynuclées  
du type (I); diminution correspondante de  
ceux des types (III IV et V)

# XLII. LES TUBERCULINES.
